

InfiniAI Pulse

A comprehensive map of the full AI agent stack – covering foundation model inference, agent platforms for reasoning & coordination, context & memory layers, shared system layers for observability and inter-agent communication, and action execution tools for UI automation and app-specific tasks.

InfiniAI Pulse

Explains the four types of AI memory: Short-Term Memory (STM) for managing session context, Long-Term Memory (LTM) for persisting and retrieving learned information, Episodic Memory for event-based recall, Semantic Memory for knowledge lookups, and Procedural Memory for executing multi-step task workflows.

InfiniAI Pulse

Illustrates an end-to-end LLM knowledge base pipeline – ingesting from articles, papers, repos, datasets, and images; processing via Q&A, linting, and indexing; storing in a structured wiki with backlinks and categories; and outputting markdown articles, slides, and charts via Obsidian as the IDE frontend, with future synthetic data generation planned.

LLM Knowledge Bases

InfiniAI Pulse

A 9-step practical guide: define agent purpose → establish input/output schemas → write system instructions → enable reasoning & external actions → orchestrate multiple agents → add memory & context → integrate multimedia → format & deliver output → build a UI or API. Includes recommended tools for each step like CrewAI, AutoGen, LangChain, and vector databases.

HOW TO BUILD AI AGENTS FROM SCRATCH:

InfiniAI Pulse

Detailed view of the three-layer enterprise AI staircase: Basic Layer (LLMs, prompt engineering, RAG, APIs, context management), Intermediate Layer (function calling, memory, multi-step reasoning, agent frameworks, agentic workflows), and Advanced Layer (autonomous planning, self-learning feedback loops, and fully autonomous cloud-scale agents).

InfiniAI Pulse

A comprehensive quick-reference for Claude covering: model tiers (Opus, Sonnet, Haiku), prompting techniques (role-play, chaining, temperature, style), prompt templates (zero/one/few-shot), free projects and artifacts features, MCP connectors, Claude Code capabilities, skills & hooks, best prompt starters, tools to pair with Claude, free Anthropic courses, and pro tips & shortcuts.

CLAUDE AI CHEAT SHEET

1. Claude Models

TABLE	Best For
Opus 4.5	Hardest tasks, reasoning, research
Sonnet 4.5	Daily use, eading, writing (default)
Haiku 4.5	Fast, cheap, simple tasks

Context: 200K tokens (all models)
Free: Sonnet 3.5
Pro (\$20/mal: + Opus + Extended Thinking
Max (\$100-\$200/ms): + Claude Code + Higher Inuits

2. Prompting Techniques

[Role Playing]	[Chained]
[Temperature]	[Linked]
[Add Examples]	[Tree of Thought]
[Style]	[Step-by-Step]

Best combo: Role + Examples + Step-by-Step

3. Acting as [Role] perform [Task] in [Format]

ROLES	TASAS	FORMAT
Act as Marketing Expert	Write blog post	Markdown
Act as Data Analyst	Create strategy	Table
Act as Senior Developer	Debug code	JSOM
Act as Senior Cook	Analyze data	CSV
Act as Financial Adviser	Build presentation	Bullet points
Act as UX Researcher	Review document	Step-by-step

4. Learning How to Prompt

Open-Ended → broad exploration
Multiple Choice → force specific output
Fill-in-the-Blank → complete template
Comparative → 'Compare X vs Y'
Scenario → 'Imagine you are...'
Instructional → 'Explain how to...'
Feedback → 'Review this and improve'

6. Projects FREE

- Organize chats by topic/client
- Upload files as project knowledge
- Set custom instructions per project
- Share with team (Team/Enterprises)
- 200K token context per project
- Pin important conversations

9. Claude Code PRO/MAX

- AI coding agent in terminal
- Reads entire codebase
- Writes, edits, tests, deploys code
- Runs shell commands
- RR integration (commits, PRs, branches)
- MCP client + MCP server simultaneously
- CLAUDE md file + project memory
- Subagents for parallel work
- Hooks: PreToolUse, PostToolUse, Stop
- Install: npm install -g @anthropic-al/claude-code
- Run: claude

11. Claude Products

- claude.ai → Web chat
- Desktop App → Mac + Windows
- Mobile App → iOS + Android
- Claude Code → Terminal agent
- Cowork → Booking automation
- API → Build own apps
- Claude in Chrome → Browsing agent
- Claude in Excel → Spreadsheet agent

14. Free Courses from Anthropic

- Free Courses (Anthropic Academy)
1. Claude 101 (Essentials)
 2. Claude Code in Action
 3. API Fundamentals
 4. Antmat Engineering Tutorial
 5. Real World Prompting
 6. Tool Use with Claude
 7. MCP Servers (Build from Scratch)
 8. AI Fluency for Students
- anthropic.skilljar.com — free + certificates

5. Prompt Templates

ZERO SHOT	ONE SHOT	ONE SHOT	FEW SHOT
'Write me 15 CTAs about [topic]'	'Write me 15 CTAs about [topic]'	'Write me 15 CTAs about [topic]. Here are 2 examples: [ex1] [ex2] [ex3] [ex4] [ex5]'	'Write me 15 CTAs about [topic]. Here are 2 examples: [ex1] [ex2] [ex3] [ex4] [ex5]'

More examples = better output. Always.

7. Artifacts FREE

- Interactive code, docs, visualizations
- React components live in chat
- HTML, Markdown, SVD, Mermaid
- MCP-connected (Asana, Stack, Calendar)
- Persistent storage across sessions
- Share + publish artifacts
- Run apps inside conversation

8. MCP + Connectors NEW

- MCP = Model Context Protocol
- Connect Claude to external tools
 - Google Drive, Gmail, Calendar
 - Stack, GitHub, Figma, Asana
 - PostgreSQL, Brave Search
 - Custom MCP servers (build own)
 - Connectors (T-slikt):
 - No API keys. Click → Authenticate
 - Works in Claude ai + Desktop + Code

10. Skills + Hooks NEW

- SKILLS
- Reusable markdown instructions
 - Auto-triggered by task type
 - .claude/skinner folder
 - Share across teams
 - Built-in + custom skills

HOOKS

Hook	When	Example
PreToolUse	Before any tool	Write writes to integration
PostToolUse	After any tool	Auto-run-Protier
Stop	When Claude Foishe	Run build + check errors
SubagentStop	Subagent completes	Validate output

12. Best Prompt Starters

- 'Act as [role] and [task]'
- 'Explain [topic] like I am 10'
- 'Compare [X] vs [Y] in table'
- 'Rewrite this to be more [tone]'
- 'Find 5 problems with this [dog]'
- 'Create step-by-step plan for [goal]'
- 'Summarize this in 3 bullet points'
- 'Generate 10 ideas for [topic]'
- 'Debug this code and explain fix'
- 'Write [format] about [topic] for [audience]'

13. Tools to Use With Claude

Tool name	What it adds
Replit	Build + deploy apps
Figma Make	Design → code
Perplexity	Real-time research
Gamma AI	Presentations
Ganva AI	Visual design
ElevenLabs	Voice + audio
Mato.com	Workflow automation
Notion AI	Organize + manage

15. Pro Tips + Shortcuts

- Use Projects for every client/topic
- Upload reference files as project knowledge
- Use Extended Thinking for hard reasoning
- Set temperature 0 for factual, 1 for creative
- Use XML tags to structure complex prompts
- Chain: first draft → Claude reviews → Claude improves
- Ask Claude to critique its own output
- Use /compact in Claude Code to save context
- CLAUDE.md = project memory that persists
- Artifacts for anything interactive or visual

InfiniAI Pulse

Clearly contrasts MCP (standardized tool access for LLMs), RAG (runtime knowledge retrieval), and AI Agents (autonomous action-taking with memory and tools). Also lists the top 12 AI GitHub repositories including OpenClaw, n8n, Ollama, Langflow, Dify, LangChain, DeepSeek-V3, Gemini CLI, RAGFlow, Claude Code, and CrewAI.
